

Zinc Clean **RZ-50**

Highly effective acid-based cleaning and deoxidation product for hot-dip galvanised surfaces.

Removes dirt and oxidation residues, in particular zinc oxide, white rust and iron oxide, has an active washing effect, removes dirt, soot, grease, oils and a range of other contaminants. Passivates and phosphates, provides temporary protection against corrosion.

In order that the full effect can be achieved during application, the zinc surfaces to be cleaned must be carefully ground wet with Zinc Clean RZ-50 and grinding fleece (not with steel wool).

Repeat the application in the case of very heavy soiling. Finally wash off or rinse with water and allow to dry thoroughly. Pay particular attention to corners and overlapping surfaces!

If used correctly, hot-dip galvanised surfaces are neither damaged nor affected to such an extent by Zinc Clean that material degradation has to be feared.

- Supply size:** plastic bottles with 1 litre contents
- Supply form:** ready-to-use solution
- Application:** brushing, rolling, limited suitability for dipping or spraying.
- Application temperature:** cold, from + 5° C, not susceptible to frost.
Do not apply to hot surfaces!
- Application equipment:** do not use tools made of steel. Suitable materials are: stainless steel, plastic, ceramics, wood.

OBSERVE THE INFORMATION IN THE SAFETY DATA SHEET!
